

## How to Replace Your Auto Speedometer Cable

Your speedometer keeps you on the right side of the speed limit by letting you know how fast you are going. You can be certain that there's no way your body would simply feel that you're close to exceeding 50 mph. If your speedometer needle starts jerking around wildly for no reason at all or simply stops moving at all, then these are signs that your speedometer cable may be done for. Fortunately, auto speedometer cable can easily be replaced, and, with the right tools and basic skills, you can do the work yourself.

We manufacture a wide range of speedo/tacho cables for any make or model of car. If you require a bespoke design for the speedo cable, give us the technical specifications and we will manufacture and dispatch your custom speedo cable as soon as possible. If you are not sure what kind of cable you need, give us a call and we will be happy to help you.
