

Automotive Accelerator Cables

Automotive accelerator cable is used to connect the accelerator pedal to the throttle body, enabling the driver to control the vehicle's acceleration. It consists of an inner cable made of metal wire and an outside casing made of rubber and metal.

Advantages

All our automotive accelerator cables are available in stainless steel braided housing, black stainless steel braided housing and black housing. A specially extruded liner is utilized for extended service life, which endows our cables with advantage over ordinary braided brake hose. Cables are equipped with aluminum fittings and aluminum ferrules to eliminate fraying. Inner cable and outer housing are "U-Cut-to Fit". Clevis is designed to equip no cotter pins or set screws. We can manufacture automotive accelerator cables of customized lengths.
