

Throttle Cable

Throttle cable connects the accelerator pedal to the throttle body, enabling the driver to control the vehicle's level of acceleration. The cable consists of an inner cable and an outside casing. The inner cable is made of metal wire and the outside casing is made of rubber and metal. Over time, the throttle cable can become worn and frayed, presenting a risk of breakage. If this occurs, the cable should be immediately replaced. As dedicated engineering throttle control cables maker, we supply a wide range of quality accelerator/throttle cables for every type of engineering machinery and vehicles.
